IPADS IN THE CLASSROOM
How to use the iPad for effective classroom instruction

Jenny Holzmer
EDUCREATIONS

Similar to a presentation creator, students can use Educreations to take & record notes, make presentations, and compile information about various subjects in an interactive and creative format.
lava fountain
volcanic chimney
lava flow
magma chamber

EVERNOTE

A note-taking app that allows students to create lists, bullet ideas, write individual notes, and complete assignments. Students can organize their notes as they see fit: by subject, by date, or by importance. Pictures can also be added to illustrate a concept or idea. Students can directly email their assignments to the teacher through this app.
This app allows students the freedom to post personal blogs, while also commenting on classmates’ blogs. In my classroom, I use KidBlog as an interactive experience for students to connect with and respond to each other about their independent reading books.
EDMODO

- A social learning experience where students connect with each other and the teacher. Students are grouped based on classes, such as 7th grade science or 8th grade social studies, and can see discussion posts, assignment details, calendar specifics, group projects, and much more. The interactive format provides ease for both the teacher and students.
Vocabulary Flashcards are attached for Tuck Everlasting. As always, the Golden Pineapple award goes to the first person to write one sentence in the reply that uses all of these words correctly.

**Vocabulary: Tuck Everlasting**

**Trey A.** - The fact that he was BURLY was IRRELEVANT; the man was very BOVINE and when he FALTERED halfway down the stairs, it was incredibly GALLING!
P.S. Mr. Roosevelt - I used a semi-colon and everything!

**Me** - Great job Trey! The Golden Pineapple will be bestowed upon you tomorrow. Sorry Kathy, better luck next week!
Students can create and publish websites about anything from this simple app. Create a project outline for students to follow, and see them create presentations about any subject to share with classmates. Each website is published with a unique URL so students can share it to receive feedback.
Untitled

Amazing Cathedral!
KNOWMIA

- This app provides access to thousands of recorded video lessons. Teachers can create an account to download pre-made lessons from other teachers, or teachers can create their own video lessons to share with students. The great thing about this app is that students can access video lessons both at school and at home after they are downloaded. It’s like having the teacher right there the whole time.
Hydrogen Atom

Whiteboard Options
Tap and hold your finger on any drawing or image to open its options menu.

Adjusting Graphics on the Whiteboard
Hold two fingers on any drawing or image to change its location, size or angle.
Hundreds of instructional videos are free of charge on khanacademy.org, and can be accessed through the app. Videos can be found for math, science, the humanities, and economics. Teachers can use the videos as an aid to instruction in the lesson, and students have access to the same video when completing a follow-up assignment or activity. There are also practice problems and questions after various sections throughout a specific topic. Students can complete these as a means of formative assessment.
before we start going off into things outside of our solar system
I wanna take a few steps back because I found this neat picture of the sun over here, and the reason why at least in my mind it's kind of
BRAINPOP

- Students can access a range of videos about science, social studies, English, math, health, arts and music, and technology. The characters Tim and Moby help explain specific topics from a variety of subjects, such as eclipses, the Civil Rights Movement, and perimeter of a circle to name a few. Students can watch the video at their own pace, and take a short quiz at the end to check for understanding.
EVERGLADES

It’s the only place gators and crocs cohabitate!
