### Introduction

The world of television, video, and radio continues to expand as new technologies are introduced. It is difficult to pick up a magazine about the television industry without seeing the words digital cable, interactive TV, or on-demand TV. The radio industry is exploring digital radio signals, satellite radio, and Internet radio broadcasting. Digital video production is becoming more and more popular as equipment, software, and technologies become more affordable. Several publications have broadened their scope to accommodate readers' interests as the development and refinement of these technologies helps to blur the lines between these three industries.

The field of home entertainment has expanded far beyond the TV, VCR, and stereo system. Today's consumer seeks information about home theater systems, complete with high-performance sound, flat-screen TV, and HDTV. Home entertainment magazines are full of reviews covering an ever-increasing array of products. The DVD market continues to grow as well, and many established magazines have expanded to include this wildly popular video format. Still other magazines have been created solely for the DVD audience.

The Internet is an important tool for accessing and evaluating the resources reviewed here. Many of the print publications have companion web sites that can be explored before a subscription is placed. Although some sites can only be fully accessed by subscribers, evaluators should be able to determine the focus of a particular publication through its corresponding web site. Several of
