**Abstract**

The purpose of this study was to decipher if a perceived alcohol culture impacts a student’s initial college choice. This study uncovered students’ motivations regarding their college choice. Discovering these motivations allowed for a better understanding of how students perceive the alcohol culture of a campus and how much it affects their decision to attend an institution. Lifestyle choices can affect why a student chooses to attend or not attend an institution. Research consistently shows a majority of students choose to use alcohol in college (Yu & Shacket, 2001; Boyle & Borko, 2009; Crawford & Novak, 2010). This information led to a need for an examination of why students select a college based on perceived drinking culture of that institution. This study offers an insight into why first-time students in the fall of 2013 decided to attend a private four-year institution as it relates to the perceived alcohol culture of the university. Discovering these motivators will allow for a better understanding of how students perceive the alcohol culture on a campus and how much it affects their decision to attend an institution.

**Demographics**

- **Gender:**
  - Male
  - Female
  - Other

- **Religious Affiliation:**
  - Catholic
  - Protestant
  - Jewish
  - Other

- **Race/Ethnicity:**
  - White
  - African
  - Hispanic
  - American Indian

**117 TOTAL RESPONDENTS**

**Research Questions**

Does the alcohol culture positively affect a student’s decision to attend an institution?

Does previous drinking behavior affect perception of alcohol culture on campus?

**Methods**

- Coogledoc form used to create survey and collect data
- Distributed to first-year students at institution (approximately 1,800)
- Survey consisted of multiple choice and open-ended questions
- Completion of survey indicates consent to participate
- Statistical procedures include correlated tests

**Findings**

- Students who drank prior to attending a specific institution are more likely to consider social life a deciding factor when selecting an institution.
- Students who drank alcohol with their parents were more likely to drink more alcohol in college.
- A majority of respondents were not influenced by peer-reviewed or national reports/media.

**Conclusions**

- There was a positive relationship with students who drank alcohol in high school and visiting the student neighborhood during their visit to the institution. The student neighborhood represents the institution’s alcohol culture.
- Students who did not drink in high school and noted social life as a college choice influencer were more likely to start drinking in college than those that did not note social life as a college choice factor.
- Students were more likely to be influenced by student reviewed sites (e.g., BroBible, 11M/12M, etc.) if they considered social life to be a top factor in selecting a college.

**Future Directions**

- Limitations to this study include:
  - Convenience sampling from first-year students at University of Dayton
  - Sample only includes first-year students: Sophomores, juniors, and seniors may provide more inclusive data
  - Study was conducted nearly one year after student’s visit and/or decision to attend institution was complete; it was not longitudinal
  - Research on students who visited campus, but chose to attend elsewhere would be helpful in better understanding the impact of alcohol culture
  - A qualitative study of students to define social life and alcohol culture at the institution will allow for a better understanding of how it affected their college choice
