DAYTON, Ohio December 12, 1968 --- The University of Dayton and the McCall Corporation have mutually agreed that plans for a new building on the University campus will not be carried forward.

The project as originally envisioned included plans for the construction of a $4,000,000 building by the University. Part of the structure would have been occupied by the McCall Information Services Company to house its computer complex and personnel; the other part would have been designed for classroom, office and laboratory space for the University's computer science and mathematics departments.

Because of complications arising out of the unusual combination of an educational and business venture to be housed in a University-owned campus building it became financially unfeasible for both parties to consummate the arrangement.

"It is with deep regret," said Very Rev. Raymond A. Roesch, S.M., University President, "that we are forced to reach this conclusion because the joint venture would have made possible some exciting developments in the field of education through the use of computers. We are grateful to MISCO for the opportunity to explore with them the possibilities in this area and for the help they have given us to date."

MISCO will occupy the third floor of Miriam Hall until late 1969 from which it will continue to provide services to the University and other educational institutions. When its new facilities are available, the large complex of IBM 360 computers and MISCO's Education Services Division will be moved to a new location in Dayton.
