DAYTON, Ohio, March 21, 1972 --- Students in a Money and Banking course taught by Dr. Charles Barrett of the University of Dayton's Economic Department recently scored 10% above the national average on a test administered by the Kansas State Teacher's College, and funded by the Armed Forces Institute. The test is designed to provide a norm for the final examinations of courses taken by military service personnel, where it is important that the norm be based on the experiences of students in civilian colleges and universities.

The test was in the form of a questionnaire and was administered to 41 colleges and universities across the country. The national average for those completing the test was 62%, while the mean for Dr. Barrett's class was 72%, with one student, Tom Miller, finishing in the 99 percentile. The questionnaire consisted of 77 multiple choice questions, which students were given eighty minutes to answer.

The finished tests were returned to the Kansas State Teacher's College, who turned them over to the Data Processing and Educational Measurements for scoring. The results were mailed back to the teachers whose classes had participated in the survey.
