DAYTON, Ohio, June 8, 1982 — The University of Dayton's School of Engineering is offering a special summer science training program for high school students. The Research Apprenticeship for Minority High School Students (RAMHSS) Program is designed to increase interest in science and engineering among high school minority students, women, and the economically disadvantaged.

The sessions at UD, to be held June 14 until August 7, consist of specially designed problem-oriented studies in physics, biology, chemistry, computer science, and engineering; with programs on career planning using minority and women scientists as instructors and role models. After the students complete this two-week session, they will gain research work experience in a six-week internship at the Wright-Patterson Air Force Base, the University of Dayton Research Institute, or local industry.

Twenty-five area students were selected to participate in the program based on scholastic aptitude and interest in science and engineering. These students will be awarded a stipend of approximately $100 per week for the six weeks of the internship phase.

This program is co-sponsored by Wright-Patterson Air Force Base, the National Science Foundation and the Department of Energy. For more information, contact project director Eugene E. Jones of the UD School of Engineering at 229-2238.
