"THINKING AS A SKILL"
TOPIC OF CREATIVITY WORKSHOP

DAYTON, Ohio, June 12, 1985 -- The University of Dayton and Creativity 80s will sponsor a workshop entitled "Thinking as a Skill" on Friday and Saturday, July 19 and 20.

The workshop will teach new ways of thinking and creative problem solving techniques to supplement traditional reasoning skills.

Four leaders in the field of creative thinking will speak on different aspects of learning how to become more creative. Dr. Robert Barthelemy, deputy director of the Aero-Propulsion Laboratory at Wright Patterson Air Force Base, and author of High Performance and 200 journal articles, will teach ways to identify creativity characteristics, analyze skills in leadership, behavior and communications, and develop a concept of purpose and strength.

Francis M. Wright, M.D., adolescent medical director of Dartmouth Center, who is involved in continuing research of self-actualization by using dreams and fantasies, will discuss the use of imagination in dreams and fantasies to discover insights and become creative.

Dr. Richard Genardi, a clinical psychologist, will teach techniques of biofeedback and open focus.

Carol M. Shaw, assistant dean, UD School of Engineering, who conducts educational workshops for the government and industry, will demonstrate through exercises how to challenge traditional thinking habits.

The deadline for registration is July 5. The $150 registration fee is reduced to $125 if a person registers before June 21. Dinner will be served on Friday evening for an additional $7.50, and lunch on Saturday for $5 per person.

The Friday session starts at 3 p.m. and continues until 9 p.m., while the Saturday session runs from 8:30 a.m. until 4 p.m., both in the John F. Kennedy Memorial Union, on the UD campus.

Graduate credit is available. For more information contact the University of Dayton School of Engineering at 229-2736.
