What of the book’s central question? Has African American theology “declined”? The answer will vary according to the viewpoint of the reader. For those whose sympathies are with orthodox evangelical Protestantism (a group in which I include myself), the argument of this work is strong. Those whose theological sympathies lie elsewhere will likely object more to his treatment of the subject, although Anyabwile’s work challenges critics to respond substantively, not dismissively. The book is a helpful supplement to African American studies, bringing a different perspective to the topic. The work provides a counterpoint that should provoke further research and discussion.

It has become commonplace to observe that the center of Christianity has moved from Euroamerica to the global south and east. Still, it is a bit jarring to realize, as Mark Noll notes at the beginning of this compelling book, that “this past Sunday” more “Anglicans attended church in each of Kenya, South Africa, Tanzania, and Uganda than did Anglicans in Britain and Canada and Episcopalians in the United States combined,” more “members of Brazil’s Pentecostals Assemblies of God [were] at church than the combined total in the two largest U.S. Pentecostal denominations,” and “more people attended the Yoido Full Gospel Church pastored by Yongi Cho in Seoul, Korea than attended all the churches in significant American denominations like the Christian Reformed Church, the Evangelical Covenant Church or the Presbyterian Church in America” (20).

As Noll makes clear in his typically lucid prose, this dramatic change in the course of Christian history has brought with it a remarkable multiplicity of Christian “forms,” as Christianity once again demonstrates its capability to become fully inculturated in wildly diverse local settings. This said, another striking quality of world Christianity in the twenty-first century is the degree to which—despite this riotous diversity—it resembles American Christianity, specifically American evangelicalism, in its emphasis on conversion, voluntarism, and entrepreneurial leadership. What this resemblance means, particularly why this resemblance exists, is at the heart of The New Shape of World Christianity: “How,” Noll asks, “should responsible participants and observers understand the role of American Christianity in the great recent transformations of world Christianity?” (11)

A commonplace answer to this question is that world Christianity looks like American Christianity because of American hegemony: America dominates the globe,
and so the globe will get an Americanized Christianity. As Noll observes, this interpretation can be cast as malign—i.e., American missionaries have joined with and are in service to the U.S. military and U.S. corporations in the effort to establish and maintain the American Empire. It can also be cast, at least in the eyes of American evangelicals (to whom Noll directs this book), as benign—i.e., American missionaries and mission agencies have successfully spread American evangelicalism throughout the globe, and so it is not surprising that world Christianity looks a lot like what one would find in a Colorado Springs megachurch.

Rejecting both forms of this interpretation, Noll uses two chapters of *World Christianity* to emphatically make the argument that it is untenable to assert that “American missionaries, whether for good or for ill, have been the controlling, hegemonic, or sovereign agents of change in the recent world history of Christianity” (107). Noll does not deny the power of American institutions and culture, but he presumes that people around the world who have adopted an American form of Christianity have done so voluntarily and actively. More than this, and central to his argument in *World Christianity*, Noll asserts that the aforementioned emphases on conversion, voluntarism, and entrepreneurial leadership that characterize much of contemporary world Christianity are due to “the fact that globalization and other factors have created societies that resemble in many ways what Americans experienced in the frontier period of their history” (189). That is to say, the resemblances are not the product of American hegemony. There is historical correlation, but not imperial causation.

There is no great effort here to clinch the case that nineteenth century America and, say, twenty-first century sub-Saharan Africa, bear striking similarities, and I would be curious to know how scholars of African, Asian, and Latin America history, politics, and society respond to this assertion. Similarly, that there is no substantive discussion of American “empire” (about which much sophisticated work has been done in the last few decades) will make it difficult to convince some readers that “hegemony” does not explain (at least in some part) why various peoples in the empire are so readily adopting the empire’s religion.

But *World Christianity* is not designed to be the final word on the matter. Nor is it addressed to a great variety of academic audiences. Instead, Noll makes very clear that this little book is “aimed primarily at my fellow evangelical Christians” (15). In this regard there is a great deal to be said on behalf of Noll’s nuanced argument. In particular, his reading of Christian history does a wonderful job of making clear that, whatever the degree of American influence and power, believers around the world have agency. Noll recognizes that there are some in his evangelical audience who will be discomfited by his argument, finding it to be an interpretation that downplays and denigrates the role of missionaries. But for Noll, to see what he is doing here as “anti-missionary” is to mistakenly buy into the notion that “the fate of Christianity depends upon missionaries from any one part of the world bringing the faith to other parts of the world,” thus missing the crucial point that “the actual movement from Christian beachhead to functioning Christian community is almost always the work of local Christians” (195).
The spread of Christianity throughout the globe is no cause for American evangelical triumphalism. And Christianity is not American, or Western: "the gospel belongs to every one in every culture; it belongs to no one in any one culture in particular" (191).

This volume makes a substantial and highly original contribution to the study of Christianity outside of Europe and North America. Its author is a renowned historian of modern India who made his mark on his field by examining India’s history “from below.” This approach shifts scholarly attention away from larger entities such as nations, colonial powers, and national elites. Instead, it prioritizes the stories of local agents and interests, villages, and smaller units of belonging (e.g., families, castes, and little kingdoms), which formed the very bedrock of empires, including the British raj in India.

By applying this perspective to the history of Indian Christianity, Frykenberg has brought balance to a topic which thus far has been dominated by Eurocentric perspectives. His comprehensive study offsets a tendency to portray Christianity as a Western religion, imposed upon Indians by European powers. Those holding center stage in his study are not Western missionaries or secretaries of ecclesiastical bodies based in Europe or North America, but Indian catechists, translators, evangelists, bishops, and converts from various caste backgrounds. In contrast to a book that may focus exclusively upon Western agents, this volume describes a complex range of factors, both local and foreign, which help explain the scope and dynamism of India’s Christian traditions.

Two factors in particular have informed Frykenberg’s approach to his topic. The first of these is an Indo-centric approach to the study of India’s past, grounded in the author’s impressive career as a scholar of modern South Asia. Three of the early chapters of this book (2, 3, and 7) draw heavily upon Indological texts, concepts, and influences having no direct relationship to the study of Christianity. With painstaking detail, Frykenberg locates his study not within the familiar terrain of European “church history,” but within the world informed by texts such as the *Ramayana*, *Arthashastra*, and the *Upanishads*. These chapters develop ideas about caste, kingship, *dharma* (or moral duty), and various streams of religiosity that have shaped the subcontinent from classical to medieval or Islamic periods. He gives special attention to devotional movements known as *bhakti* cults and well-established traditions centered upon the worship of Vishnu and Shiva. These institutions form the arena in which Christian movements have taken root.
