Students Perception of Alcohol Induced Blackouts at the University of Dayton

Why?
A study by O'Mahony (2004) found that blackouts can occur among drinkers of all levels, may they be modest drinkers or those with alcohol addiction. Although alcohol blackouts can happen to those who are new to drinking there is some data that suggests that they could become more frequent with longer alcohol consumption and when someone becomes addicted to alcohol (O'Mahony, 2004).

Research Question
What are the University of Dayton students' thoughts on alcohol induced blackouts?

Materials and Methods
- 37 Question Survey
- Survey distributed to 180 students, from all academic years
- Survey was administered by the Community Wellness office (Vernique Coleman-Stokes) and in classes
- Survey results collected a month and a half after the week of January 26.

Findings
- 150 respondents
- 74% of respondents said they have blacked out, specifically at the University of Dayton

Blackout Occurrences at the University of Dayton

Feelings after blackout?
- 46 students said they were scared because they could not remember what happened during a drinking episode
- Others said they were embarrassed, mad at themselves, did not feel good, hated it, it was funny, and indifferent.

Special thanks to the Community Wellness Office, English Professor/Instructors, and Dr. Molly A. Schaller
