The majority of hearing impaired students in public universities in Saudi Arabia encounter several challenges, including inadequate learning infrastructure and poor academic inclusion. Although they have the potential to succeed, these inadequacies curtail their ability to attain desirable academic standards. In most cases, they feel left out not only in class work, but also in co-curricular activities, which results in dismal performance and low self-esteem. University administration can fix these problems so as to give the hearing impaired students a productive and fulfilling learning environment at the university. This research examined the impact of the inadequate learning infrastructure in Saudi Arabia, and academic inclusion on the performance of first-year hearing-impaired students. Findings suggest that there is still a need for program development for hearing impaired students.

Research Questions

1. What resources are available to hearing-impaired higher education students in Saudi Arabia?

2. How can the education programs catering to the deaf in public universities in Saudi Arabia be improved?

METHODS

- The inequities that exist among the hearing-impaired population in public Saudi Arabian Universities are obvious.
- The success rate of first-year hearing-impaired students attending public Universities in Saudi Arabia must be evaluated.
- This section includes the purpose of the study, the description of methods used to analyze the inequities that exist among first-year hearing-impaired students attending public Universities in Saudi Arabia.

DATA COLLECTION

Findings include a lack of resources available to hearing impaired students attending public Universities in Saudi Arabia.

Projected recommendations will be based off of this lack of support to hearing impaired students.

Data collected from 63 female and male hearing impaired students, provided an unbiased view of the current situation.

RESULTS

65% MALE
35% FEMALE

The current program is lacking in the area of providing sign language aides in mainstream courses.

The students who are aware about the university’s policies for disabled students, especially those for hard-of-hearing learners.

The students who feel that your instructors are strict on following or implementing the policies.

REFERENCES

ACKNOWLEDGEMENTS

Thanks God for giving me a chance to try to help deaf students. I would like to thank Dr. Nasser for providing me this opportunity to conduct this research. I sincerely appreciate the assistance of the Vice Rectorate for Graduate Studies and Scientific Research at King Saud university in the Kingdom of Saudi Arabia. I want to also thank my brother to supporting me and connect with the University.
